

## **WC CARDINAL'S New Medium Cantilever Rack - Priced to Sell!**

Expanding the Cantilever Racking System to include both Heavy Duty and Medium Cantilever racking has made the Cantilever Racking System more popular than ever. The company is happy to offer the same features and benefits of our Heavy Duty Cantilever Racking System to customers who's needs are satisfied with the new Medium Cantilever Rack.

WC Cardinal's Cantilever is the perfect choice for holding 4-foot and 5-foot sheets of aluminum, stainless or carbon steel as well as long, slender shapes called lineals, aluminum extrusions, bars, and heavy structurals ranging from 12 feet to 26 feet long. It's ability to store material as high as a ceiling will allow in aisles as narrow as 64" wide, increases storage capacity and ensures a nice return on investment.

**The height of the arms can be easily changed thanks to the unique feature of the rectangular steel pins connecting the arms to the columns. Adjustments are easily made by removing the pin with a small sledgehammer. Unlike other welding systems, there's no need for welding and there's no cumbersome nuts and bolts that make adjustments very time-consuming. Plus, the pins lock the arms in place to withstand the impact of loading and unloading.**

Converting these units from one-sided racks to two-sided racks, is easy too. The columns are punched on both sides to allow this flexibility. WC Cardinal's attributes its Cantilever racking system's success to it's quality engineering. The Medium Cantilever Rack pricing is making are dealers and their customers very happy too.
